**DETAILED ACTION**

***Election/Restrictions***

1. Claims 1-3 and 16-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 18 August 2005.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 4-7 and 9-15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Moore, US006306008B1. '008 discloses the claimed invention, including using a sensor to measure torque to determine a characteristic of a conditioner, please refer to the entire disclosure, but especially to column 5, lines 49 through column 6, lines 57 and column 7, lines 49-56.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 8 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Moore, US006306008B1. '008 discloses using the information from the sensor(s) to determine the condition of the conditioner.

Inherently, the system operator would naturally estimate the remaining lifetime of the surface of the conditioner based on the sensor information, as a conditioner nearing the end of its useful life would not function properly to clean the polishing pad, causing damage to the workpiece. If applicant argues that such is not inherent, the examiner takes Official notice that one of ordinary skill would know to monitor the condition of the surface of the conditioner to estimate the remaining lifetime, to prevent damage to the workpiece through the use of an improperly processed polishing surface.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other similar conditioning systems are cited of interest. All rely

on sensors to determine the torque or friction of the conditioner relative to the polishing pad.
